

## Case Study – BAE Systems

### The Problem:

Aviation research, development & maintenance requires engineers to walk on top of military aircraft to access difficult to reach areas. This creates a health & safety problem that must be addressed. Existing aviation staging is not versatile enough as it is a fixed structure and does not adjust to meet different aircraft dimensions.

### The Solution:

LOBO Systems’ safe and secure access platform product. The unique and patented clamp allows the system to be assembled into any size or shape. Engineers can reconfigure the system, adapting it from one project to another with ease, to create an aviation stand or fall protection system around any aircraft. By fitting wheel kits, the system can be made mobile for fast deployment. The system can be assembled, disassembled and reassembled quickly without the use of tools. It can be flat packed and is easily transportable.

*The unique & patented LOBO clamp*

### The Benefits:

The unique versatility of the LOBO System brings cost and labour reduction, enhanced efficiency & performance together with

a safer working environment. Its transportability means it can be used anywhere in the world and can be erected by anyone.

This allows aviation mechanics to assemble the system to their exact requirements, thus saving on labour costs, whilst meeting stringent health & safety regulations.

The LOBO System creates a safe working environment, which increases productivity and maximizes the return on investment.

### Conformities

EU: BS EN1004:2004 BS 1139 parts 3 & 4,  
USA: OSHA Compliant, ANSI A10.8, 29 CFR Part 1920 (General Industry)  
Canada: CSA Z797-09 and 269.2 (M87 and -16)  
Australia: AS/NZS 1576.1:2010 and AS/NZS 1576.3:2015 Tower
