

Case Study - Hydro Aluminium

The Problem:

Hydro Aluminium have implemented a multi-purpose scaffolding work platform system that must be OSHA compliant and give access to Hydro personnel to work on top of their trucks to put on tarp covers. Traditional scaffolding is too heavy and cumbersome and takes too long to erect, while aluminium towers are the wrong shape & take up a lot of space when not in use.

The Solution:

LOBO Systems' safe and secure platform product. The unique and patented clamp allows the system to be assembled rapidly without the use of tools into any size or shape. This allows Hydro personnel to assemble a safe system down the length of the truck. This means personnel are not exposed to the risk of a fall while covering the trucks with a tarp cover.

The Benefits:

This unique versatility of the LOBO System brings a safe working procedure to Hydro Aluminium, which not only meets OSHA requirements, but also meets Hydro's safety policy.

The LOBO System also brings cost reduction, enhanced efficiency & performance as crews can build their own platforms at any time. The LOBO System creates a safe working environment, which increases productivity and maximizes the return on investment.

The unique & patented LOBO clamp
