

Testimonials - Complimentary Training Course

Rob & The Team at LOBO,

Firstly may I pass on my appreciation to you all for the hospitality afforded during our training day at your premises on Wednesday 29.08.12.

The training met with all my expectations in fact the delivery exceeded them.

The premises, training content and professional practical approach have allowed me to recommend without hesitation your services to others. This is something which I do not do lightly as we do expect high standards from suppliers and associates.

I have purposely left comments on your product until last.

The LOBO product is definitely an excellent solution to Work at Height problems, it is a practical, user friendly system which allows those required to perform tasks at height to do so using a safe and cost effective, controlled method.

Users of LOBO systems can achieve, monitor and maintain compliance with the legislation without the need to delegate or incur costs from scaffolders or hire companies. Users can be comfortable in accepting their own responsibility for this simple to erect, alter and dismantle equipment.

I will certainly be promoting the system as a control measure when preparing risk assessments and safe systems of work for our clients in the diverse industries, tasks and locations encountered.

Regards

"Thanks for the opportunity to attend one of your training courses. As a H&S Manager I personally found the practical hands on approach to the course very informative and particularly enjoyable.

The trainer was excellent at demonstrating how simple and flexible the system is to use and related it to real life situations that attendees put forward. It seemed to me that all the attendees got something useful out of the day.

"I would just like to thank you and your staff for the training course I attended on the 4th July. The course content was tailored exactly to my needs giving me a complete understanding of your system, the trainer delivered the content in a very structured way and put all of us at ease and under no pressure and allowed us to work at our own pace. My company is now looking to purchase a system and follow up with further training for our technicians.

Seminar Testimonial

Hi Diane,

Thank for giving me the opportunity to reflect on the day spent with Lobo on Tuesday. I really enjoyed the opportunity to learn more about the Lobo system, I was particularly pleased with having the chance to use the system, under the very capable guidance of the instructors of course, it was also good fun to learn with the other professionals who attended, we can always pick up information and ideas from each other. The initiative you have taken to invite interested parties to your site and promote your product in such a manner is in my opinion refreshing and a great opportunity for both, yourselves and the attendees alike, all the best for the future.

Testimonial

"A good product which was backed by informative and professional demonstration of it's capabilities on the day, I would recommend to anyone involved with seeking solutions to working at height safely to attend your presentation and training day. I certainly learned some new skills and appreciated the opportunity to try the system first hand."

Thank you and Kind Regards

Seminar Testimonial

Good morning Diane

Firstly may I sincerely thank everyone at LOBO Systems for inviting me to take part in the short course yesterday. The organisation, planning and hospitality was excellent and I came away feeling that I had been not only properly trained in the rudiments of assembling the Lobo platform system but also enlightened as to the significant potential your system has for diverse uses in industry where safe access is required to carry out necessary activities at height, especially in awkward situations.

I also came away feeling that I had visited a very good company who value their employees, a primary requirement in my view, for continued success. I wish you all well with the future.

As far as a testimonial is concerned:

'I found the course to be a thorough and genuine introduction through practical learning into the use of the Lobo Platform system, competently delivered by a strong team that clearly believe in the company and its product range. Rightfully so, as the system has been well engineered and carefully thought out. It clearly has significant breadth of application and the training session has triggered my thought processes into motion as I consider the potential advantages this system could bring to the companies I work with as they continue to look for better and safer ways to protect their employees from the inherent risks of working at height. I am sure there will be many applications for this product'.

A valued experience, thanks again to Robert and the team.

Regards
